

## 02. DigiMedia

You are given an unresponsive website (**HTML + CSS + images**). Your task is to **make the site responsive**.

The site layout should change according to the browser viewport / screen size.

You need to implement 1 layout: **width <= 600px**. The figures below represent this layout:

## Output

The output should be valid **HTML5** + **CSS3** + **images** that implement the above responsive site.

## Constraints

- You should write styles in the **responsive.css** file (CSS folder).
