

02. Little Baby Gym

You are given an unresponsive website (**HTML + CSS + images**). Your task is to **make the site responsive**.

The site layout should change according to the browser viewport / screen size.

You need to implement 1 layout: **width <= 600p**. The figures below represent this layout:

- **width <= 600px (mobile)**

Output

The output should be valid **HTML5** + **CSS3** + **images** that implement the above responsive site.

Constraints

- You should write styles **only** in **responsive.css** file.
- The site should open correctly in the **latest** version of **Chrome**
